

Shopstack order journal to Ledgerly

Field	Value
Systems	Shopstack (storefront) -> Ledgerly (accounting)
Owner	Ana Petrova (AP) Maintainer: Ray Lindqvist (RL)
Written	2024-05-14
Updated	2025-06-10: added the restocking-fee sub-account and the B2B waiver handling below.

Schedule

Nightly export at 02:15 Pacific. The feed covers every order captured up to midnight, and anything placed after that cutoff simply waits for the next run rather than triggering a second pass. Refunds post on the refund date, not the original order date, which matters most at month boundaries, since a refund on an April order can land in the May journal instead.

Access

Ana holds Shopstack admin and the Ledgerly import queue. Ray holds Shopstack admin only, no Ledgerly login at all, so a mapping change he makes has no path to post itself without Ana reviewing the import first.

Field mapping

Shopstack field	Ledgerly destination	note
order.subtotal	4000 Sales	
order.discount_total	4090 Discounts	contra-revenue
order.shipping_collected	4200 Shipping income	zone rate per the shipping policy, zero on any order that clears the 75.00 free-shipping threshold
order.tax_collected	2300 Sales tax payable	sub-account per ship-to state: 2300-WA, 2300-CA, 2300-US for every other taxed state; Oregon orders carry no tax line at all
refund.amount	4100 Returns and allowances	posts on the refund date
refund.restocking_fee_withheld	4110 Restocking fee retained	new account, added with this update; waived automatically on any B2B order of 10 or more units under the policy in force since 02 Jun 2025

Reconciliation report

Every Friday, Ana pulls Ledgerly's journal lines for the trailing seven days, grouped by account, and checks them against Shopstack's own weekly order-total export. If the two totals under 4000 Sales don't match to the cent, the mismatch is almost always a same-day order edit that fell on the wrong side of the 02:15 cutoff. One example from last month: order #LS64008, one Sparrow cable kit at 35.00 to an

Oregon address, no tax, 5.95 light-zone shipping, 40.95 total charged. The customer opened it, didn't like the fit, and returned it inside the 30-day window. The restocking fee took 10% of the item price, 3.50, leaving a refund of 31.50 posted to 4100 net of the 3.50 held in 4110. A single-unit order like that one never qualifies for the B2B waiver, so Ana expects to see the 4110 line every time; its absence on an obviously single-seat return is worth a second look on its own.

Failure modes

- Order edited after its nightly export does not re-sync automatically. Detect it on the Friday reconciliation; fix it in Shopstack under Journal feed, Re-send, then confirm the corrected line landed in Ledgerly.
- Feed outage. Shopstack retries at 03:15 and 04:15, then emails ana@larkstead.example directly. Ana treats a missed retry as a same-day fix, not a Monday problem.
- Restocking fee posted on a qualifying B2B order. Detect when a return tagged 10+ units still carries a 4110 line; fix by reversing the entry by hand and flagging Ray in case the order's unit count didn't carry through the export correctly.

Change control

Mapping changes go through Ray, Tuesdays and Thursdays only per his contract, with Ana's sign-off, tested against the Ledgerly sandbox before touching the nightly run.

Verification

Ana reconciles the week's journal lines against Shopstack's order totals every Friday. That's the whole check.
